

SMART METER HEARING
10/09/12
AUSTIN, TX

I have been a cardiovascular surgeon and know the advantage of EMF as I have shocked many people back to life when their heart has stopped and healed wounds that would not heal otherwise using electricity.

Historically, the former Premier of Norway and former President of the World Health Organization, Gro Harlem Bruntland has problems with the smart meter.

My colleagues and I, who are experts in the EMF, wrote the first paper in the world proving that EMF waves could be harmful for some people. This was in 1991 and we have seen over 1500 people who have become sensitive to EMF. With the institution of the smart meters, we have seen a large increase in illness due to their EMF output. The range of symptoms has included heart arrhythmia, brain, muscle and joint dysfunction. People with metal implants have an antenna effect which accentuates the problem. They are vulnerable to smart meters.

People appear to have little protection because the waves go through many buildings. The smart meters contribute to EMF smog and have been shown to cause the rapid aging syndrome with physiological stress.

The smart meter EMF exposure can decrease antioxidants, neurotransmitters, hormones, etc. It can also increase epinephrine, histamine, punch holes in the blood brain barrier, and increase calcium into the cells which cause fatigue.

There are several countries such as Norway, Sweden, and Austria that have legislation about smart meters. The smart meters can put out “dirty electricity” that can cause physical disruption to the body. There are many predisposing factors that can make EMF and smart meters cause problems in humans. These include physical trauma, i.e., head injury; chemical overload, i.e., xs, pesticide, natural gas, formaldehyde, etc.; metal implants, i.e., artificial hips, joints, pacemakers, etc.; biological sensitivity, i.e., sensitivity to pollens and dusts; impaired immune system; MRI machines; exposure to fire retardants and mold and mycotoxin exposure.

The forced use of smart meters appears to be at this time dangerous and should not be forced upon the public without their individual permission.
